# **Double Action Hydraulic Pump**

**General Description** 

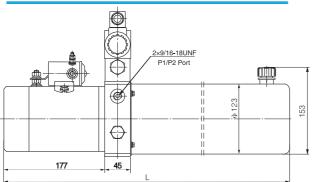

## Hydraulic Circuit Diagram

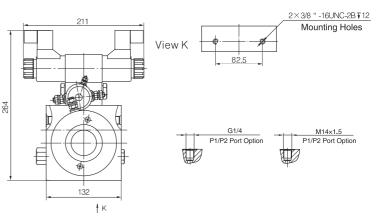

Because of its stable performance and compact structure, the Double Acting Power Units can be widely used in automotive

industry, garden machinery, machine tools, logistics equipment etc.

#### **Outline Dimension**

## **Model Specifications**

Motor Volt	Motor Power	Rated Speed	Displacement	System Pressure	Tank Capacity	L(mm)
12VDC	1.5KW	2500RPM	2.1mL/r	20MPa	3L	567
24VDC	2KW		2.5mL/r	20MPa	5L	472
220VAC	1.5KW	1400RPM	2.7mL/r	22MPa	6L	642
			3.2mL/r	20MPa	12L	692
	2.2KW	2800RPM	2.5mL/r	18MPa	14L	665
			3.2mL/r	15MPa	16L	597
			4.2mL/r	10MPa	16L	597
380VAC	ЗКШ		2.7mL/r	20MPa	20L	930
			3.2mL/r	18MPa	22L	1015
			3.7mL/r	16MPa	25L	1100

### **Special Notes**

1)Due to various types of hydraulic system failure occur more than 80% of the problems are caused by hydraulic oil, so the correct use of hydraulic oil to ensure the system's reliability is very important. The oil viscosity should be 22-46mm2/s in accordance with ISO3448 viscosity classification. The hydraulic oil should be filtered by a 10-30um filter before put into use. N46 hydraulic oil is recommended.

2)Clean all the hydraulic parts concerned before mounting mini hydraulic power pack. Check the oil level in the tank after the initial running of small hydraulic power unit.

3)Oil changing is required after the initial 100 operation hours, afterwards once every 3000 hours. We are at your disposal to offer you the power unites with your favorite power, flow, pressure as well as the tank capacity.

4) The electric hydraulic pump should be horizontal installation.

5)The electric hydraulic pump is of s3 duty, i.e., 30 seconds on and 270 seconds off.

6)To achieve thermal equilibrium of the electric motor, we have to assure that the ratio between interval time and operation time of mini

hydraulic power pack is 1:9.

7)Mechanical locks are needed on both platforms to use this product.
